PRINCIPALES CAUSES DE DEFAILLANCE DES POMPES

PRINCIPALES CAUSES DE DEFAILLANCE DES POMPES

CAVITATION

CAVITATION

Les bulles changent le comportement du liquide et détériorent le rendement de la pompe.

D'autre part les bulles disparaissent en implosant. Les valeurs de pression et de température générées par le phénomène sont très importantes et destructrices pour la pompe elle même.

DEGATS PROVOQUES PAR LA CAVITATION

LES CAUSES DE LA CAVITATION

LES CAUSES DE LA CAVITATION : CREPINE OBSTRUEE

LES CAUSES DE LA CAVITATION : VANNE FERMEE

LES CAUSES DE LA CAVITATION:

LES CAUSES DE LA CAVITATION : FLUIDE TROP FROID

LES CAUSES DE LA CAVITATION : TUYAUTERIES TROP ELOIGNES

LES CAUSES DE LA CAVITATION : TROP DE PERTES DE CHARGE

LES CAUSES DE LA CAVITATION : HAUTEUR D'ASPIRATION TROP IMPORTANTE

LES CAUSES DE LA CAVITATION : VITESSE DE L'HUILE TROP IMPORTANTE

LES CAUSES DE LA CAVITATION : LE FILTRE à AIR EST OBSTRUE

LES CAUSES DE LA CAVITATION : LE FILTRE à AIR EST OBSTRUE

PRINCIPALES CAUSES DE DEFAILLANCE DES POMPES
